

SoLID re-binned, SBS as points — nothing cut

SoLID on the 0.05 x 0.75 grid as a density; SBS rows at their own positions, no FOM shown. Boxes are the SBS cells: x in 0.1 steps, Q^2 from the $\theta_e = 25 - 37^\circ$ and $p_e > 1$ GeV acceptance at each beam energy. $W = 2.3$ GeV drawn for reference, not applied.
