

*E*statraw per bin, with ratio panels — data_phifull_phisfold_bin10deg
 SoLID acceptance (2π), 1660 bins · main and ratio y-axes identical across all three figures
 E^{raw} sits above E^{diag} in essentially every bin — a systematic offset, not a few outliers.

— E^{raw} (row norm, production) — E^{diag} (least squares) — E^{prop} (PR-10-006 App. II)
