

*E*statraw per bin, with ratio panels — data_4pi_phifullbin
 4π (accut off), same 1660 bins · main and ratio y-axes identical across all three figures
 All three coincide: the acceptance, not the binning, is what separates them.

— E^{raw} (row norm, production) — E^{diag} (least squares) — E^{prop} (PR-10-006 App. II)
